Abstract

The current article proposal is to introduce the development of an application of computer network within the hospital setting.

1 introduction

Technology is increasingly present in the medical field and aims to improve the care that is offered to patients in healthcare facilities. It also allows diagnoses to be more faster and accurate, besides the option for less invasive treatments. At/On this scenario, a modern Intensive Central Units (ICU) has many equipment essential to support patient's life, such as multiparameter monitors and mechanical ventilators, among others such as infusion pumps, for example.
